

MemberFrame How It Works

The KnowWho MemberFrame hosted application provides website owners the ability to empower users to obtain information for their elected officials at the US and State government levels. It is implemented within an IFRAME on the customer website and can be stylized to match the graphical look-and-feel of the hosting website. Features include an address look-up, browse and search options.

An optional Messaging Service can also enable users to send electronic messages to selected officials.

The application is utilized through a subscription and the maintaining of credits. For each user request the customer's credit balance will be decremented by one (1) credit for each level of government. For example, a single user look-up in both the US and State government would use two (2) credits even if it returns contact information for multiple legislators from the same state or district.

With the optional Messaging Service, for each official to whom a message is delivered, the customer's credit balance will be decremented by one (1) credit per message.

Visitors can locate their elected officials in two easy steps, and then review individual profiles or send electronic messages to selected officials. The message can be personal or created by your administrator.

The following images, all stylized to mimic the parent website, are the initial MemberFrame page which can be modified to display only your desired features; the address form if the 5-digit zip code results in split districts; the elected officials display; a legislator directory page and the electronic message form.

HOSTED APP DEMO

This KnowWho MemberFrame demo is fully functional. It also includes the optional messaging service, however it will NOT send actual messages.

Your instance can be styled to match your website look-and-feel, the social media share bar can be toggled on or off based on your preference, and customer instances are available for just US or State government or both.

Contact us to discuss how you can be up and running with one line of code and an hour of setup. It's that easy!

Usage is logged, please don't abuse!
